What is HTML

HTML (HyperText Markup Language) is the most basic building block of the Web.

It defines the meaning and structure of web content.

Other technologies besides HTML are generally used to describe a web page's appearance/presentation (CSS) or functionality/behavior (JavaScript).

An HTML document is basically a webpage.

The HTML file must be saved with .html or .htm extension.

HTML is case-insensitive language.

An HTML document contains tags. The tags are the basic building block of every HTML document.

Every HTML document has following structure:

```
<!DOCTYPE html>
```

```
<html>
```

```
  <head>
```

```
    <title>Title goes here</title>
```

```
  </head>
```

```
  <body>
```

```
    Content goes here.
```

```
  </body>
```

```
</html>
```
