## Hyperlink

The hyperlink is a text on which you can click and jump to another document.

When you move the mouse over a hyperlink, the mouse arrow will turn into a little hand.

The **<a>** HTML element (or anchor element), with its **href** attribute, creates a hyperlink to web pages, files, email addresses, locations in the same page, or anything else a URL can address.

### Example:

```
<a href="https://youtube.com/tarunsir">Visit my youtube channel</a>
```

By default, links will appear as follows in all browsers:

- An unvisited link is underlined and blue
- A visited link is underlined and purple
- An active link is underlined and red

A linked page is normally displayed in the current browser window unless you specify another target. You can use **target=\_blank** to open the linked page in new tab.

### Example:

```
<a href="https://youtube.com/tarunsir" target="_blank">Visit my youtube channel</a>
```
