

## Full Binary tree vs Complete binary tree

Hey programmers, here we will discuss two different types of binary trees and the differences between them.

### Full binary tree

A binary tree is a full binary tree if it contains the maximum possible number of nodes at all levels.

### Complete binary tree

A binary tree is said to be a complete binary tree if all its levels, except possibly the last level have the maximum number of possible nodes, and all the nodes in the last level appear as far as left as possible.
