HTML Headings

- The **<h1>** to **<h6>** HTML elements represent six levels of section headings. **<h1>** is the **highest** section level and <h6> is the **lowest**.
- HTML headings are titles or subtitles that you want to display on a webpage.
- Do not use heading elements to resize text. Instead, use the CSS font-size property.
- Do not skip heading levels: always start from <h1>, followed by <h2> and so on.
- Avoid using multiple <h1> elements on one page.
- Search engines use the headings to index the structure and content of your web pages.
- It is important to use headings to show the document structure.
- <h1> headings should be used for main headings, followed by <h2> headings, then the less important <h3>, and so on.
